

# The `holo` package

Heiko Oberdiek\*

2021-11-16 v1.15

## Abstract

This package starts a collection of logos with support for bookmarks strings.

# 1 Documentation

## 1.1 Logo macros

`\hologo {\langle name\rangle}`

Macro `\hologo` sets the logo with name `\langle name\rangle`. The following table shows the supported names.

name	variant	logo	since
(La)TeX		(L)TeX	2011/10/01
AmSLaTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -LATEX	2010/04/16
AmSTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -TeX	2010/04/16
biber		biber	2011/10/01
BibTeX		BIBTeX	2011/10/01
BibTeX	sf	BIBTeX	2011/10/01
BibTeX	sc	BIBTeX	2011/10/01

`\Hologo {<name>}`

Macro `\Hologo` starts the logo `<name>` with an uppercase letter. As an exception small greek letters are not converted to uppercase. Examples, see  $\varepsilon$ -TeX and  $\varepsilon_X$ -TeX.

## 1.2 Setup macros

The package does not support package options, but the following setup macros can be used to set options.

`\hologoSetup {<key value list>}`

Macro `\hologoSetup` sets global options.

`\hologoLogoSetup {<logo>} {<key value list>}`

Some options can also be used to configure a logo. These settings take precedence over global option settings.

## 1.3 Options

There are boolean and string options:

**Boolean option:** It takes `true` or `false` as value. If the value is omitted, then `true` is used.

**String option:** A value must be given as string. (But the string might be empty.)

The following options can be used both in `\hologoSetup` and `\hologoLogoSetup`:

**break:** enables or disables line breaks inside the logo. This setting is refined by options `hyphenbreak`, `spacebreak` or `discretionarybreak`. Default is `false`.

**hyphenbreak:** enables or disables the line break right after the hyphen character.

**spacebreak:** enables or disables line breaks at space characters.

**discretionarybreak:** enables or disables line breaks at hyphenation points (inserted by `\-`).

Macro `\hologoLogoSetup` also knows:

**variant:** This is a string option. It specifies a variant of a logo that must exist.

An empty string selects the package default variant.

Example:

```
\hologoSetup{break=false}
\hologoLogoSetup{plainTeX}{variant=hyphen,hyphenbreak}
Then "plain-TEX" contains one break point after the hyphen.
```

## 1.4 Driver options

Sometimes graphical operations are needed to construct some glyphs (e.g. X<sub>E</sub>T<sub>E</sub>X). If package `graphics` or package `pgf` are found, then the macros are taken from there. Otherwise the package defines its own operations and therefore needs the driver information. Many drivers are detected automatically (pdfT<sub>E</sub>X/LuaT<sub>E</sub>X in PDF mode, X<sub>E</sub>T<sub>E</sub>X, VT<sub>E</sub>X). These have precedence over a driver option. The driver can be given as package option or using `\hologoDriverSetup`. The following list contains the recognized driver options:

- pdftex, luatex
- dvipdfm, dvipdfmx
- dvips, dvipsone, xdvi
- xetex
- vtex

The left driver of a line is the driver name that is used internally. The following names are aliases for drivers that use the same method. Therefore the entry in the `.log` file for the used driver prints the internally used driver name.

**driverfallback:** This option expects a driver that is used, if the driver could not be detected automatically.

```
\hologoDriverSetup {\langle driver option \rangle}
```

The driver can also be configured after package loading using `\hologoDriverSetup`, also the way for plain T<sub>E</sub>X to setup the driver.

## 1.5 Font setup

Some logos require a special font, but should also be usable by plain  $\text{\TeX}$ . Therefore the package provides some ways to influence the font settings. The options below take font settings as values. Both font commands such as  $\text{\sffamily}$  and macros that take one argument like  $\text{\textsf{}}$  can be used.

<code>\holoFontSetup {&lt;key value list&gt;}</code>
--

Macro `\holoFontSetup` sets the fonts for all logos. Supported keys:

**general:** This font is used for all logos. The default is empty. That means no special font is used.

**bibsf:** This font is used for  $\text{\BIBTeX}$  with variant `sf`.

**rm:** This font is a serif font. It is used for  $\text{\varepsilon_X\TeX}$ .

**sc:** This font specifies a small caps font. It is used for  $\text{\BIBTeX}$  with variant `sc`.

**sf:** This font specifies a sans serif font. The default is `\sffamily`, then `\sf` is tried. Otherwise a warning is given. It is used by KOMA-Script.

**sy:** This is the font for math symbols (e.g. `cmsy`). It is used by  $\text{\mathcal{AM}\mathcal{S}}$ ,  $\text{\mathcal{N}\mathcal{T}\mathcal{S}}$ ,  $\text{\varepsilon_X\TeX}$ .

**logo:** METAFONT and METAPOST are using that font. In  $\text{\LaTeX}$  `\logofamily` is used and the definitions of package `mflogo` are used if the package is not loaded. Otherwise the `\tenlogo` is used and defined if it does not already exists.

<code>\holoLogoFontSetup {&lt;logo&gt;} {&lt;key value list&gt;}</code>
---

Fonts can also be set for a logo or logo component separately, see the following list. The keys are the same as for `\holoFontSetup`.

<i>&lt;logo&gt;</i>	keys	result
$\text{\BibTeX}$	<code>bibsf</code>	$\text{\BIBTeX}$
$\text{\BibTeX}$	<code>sc</code>	$\text{\BIBTeX}$
$\text{\ExTeX}$	<code>rm</code>	$\text{\varepsilon_X\TeX}$
$\text{\SliTeX}$	<code>rm</code>	$\text{\SliTeX}$
$\text{\AmS}$	<code>sy</code>	$\text{\mathcal{AM}\mathcal{S}}$
$\text{\ExTeX}$	<code>sy</code>	$\text{\varepsilon_X\TeX}$
$\text{\NTS}$	<code>sy</code>	$\text{\mathcal{N}\mathcal{T}\mathcal{S}}$
$\text{\KOMAScript}$	<code>sf</code>	KOMA-Script
$\text{\METAFONT}$	<code>logo</code>	METAFONT
$\text{\METAPOST}$	<code>logo</code>	METAPOST
$\text{\SliTeX}$	<code>sc</code>	$\text{\SliTeX}$

### 1.5.1 Font order

For all logos the font `general` is applied first. Example:

```
\holoFontSetup{general=\color{red}}
```

will print red logos. Then if the font uses a special font `sf`, for example, the font is applied that is setup by `\holoLogoFontSetup`. If this font is not setup, then the common font setup by `\holoFontSetup` is used. Otherwise a warning is given, that there is no font configured.

## 1.6 Additional user macros

Usually a variant of a logo is configured by using `\holoLogoSetup`, because it is bad style to mix different variants of the same logo in the same text. There the following macros are a convenience for testing.

```
\holoVariant {\langle name \rangle} {\langle variant \rangle}
\HoloVariant {\langle name \rangle} {\langle variant \rangle}
```

Logo `\langle name \rangle` is set using `\langle variant \rangle` that specifies explicitly which variant of the macro is used. If the argument is empty, then the default form of the logo is used (configurable by `\holoLogoSetup`).

`\HoloVariant` is used if the logo is set in a context that needs an uppercase first letter (beginning of a sentence, ... ).

```
\holoList
\holoEntry {\langle logo \rangle} {\langle variant \rangle} {\langle since \rangle}
```

Macro `\holoList` contains all logos that are provided by the package including variants. The list consists of calls of `\holoEntry` with three arguments starting with the logo name `\langle logo \rangle` and its variant `\langle variant \rangle`. An empty variant means the current default. Argument `\langle since \rangle` specifies with version of the package `holo` is needed to get the logo. If the logo is fixed, then the date gets updated. Therefore the date `\langle since \rangle` is not exactly the date of the first introduction, but rather the date of the latest fix.

Before `\holoList` can be used, macro `\holoEntry` needs a definition. The example file in section 1.8 shows applications of `\holoList`.

## 1.7 Supported contexts

Macros `\holo` and friends support special contexts:

- `\LaTeX`'s protection mechanism.
- Bookmarks of package `hyperref`.
- Package `tex4ht`.
- The macros can be used inside `\csname` constructs, if `\ifin csname` is available (`pdfTeX`, `XeTeX`, `LuaTeX`).

## 1.8 Example

The following example prints the logos in different fonts.

```
1 /*example*/
2 %%<<verbatim
3 \NeedsTeXFormat{LaTeX2e}
4 \documentclass[a4paper]{article}
5 \usepackage[
6   hmargin=20mm,
```

```

7   vmargin=20mm,
8 ]{geometry}
9 \pagestyle{empty}
10 \usepackage[hologo]{2019/12/05}
11 \usepackage{longtable}
12 \usepackage{array}
13 \setlength{\extrarowheight}{2pt}
14 \usepackage[T1]{fontenc}
15 \usepackage{lmodern}
16 \usepackage{pdflscape}
17 \usepackage[
18   pdfencoding=auto,

### 3 Installation

#### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/hologo/hologo.dtx](http://CTAN:macros/latex/contrib/hologo/hologo.dtx) The source file.

[CTAN:macros/latex/contrib/hologo/hologo.pdf](http://CTAN:macros/latex/contrib/hologo/hologo.pdf) Documentation.

**Bundle.** All the packages of the bundle ‘hologo’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/hologo.tds.zip](http://CTAN:install/macros/latex/contrib/hologo.tds.zip)

*TDS* refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:pkg/tds](#)). Directories with `texmf` in their name are usually organized this way.

---

<sup>1</sup>[CTAN:pkg/hologo](#)

## 3.2 Bundle installation

**Unpacking.** Unpack the `hologo.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip hologo.tds.zip -d ~/texmf
```

## 3.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain `TEX`:

```
tex hologo.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>hologo.sty</code>	→ <code>tex/generic/hologo/hologo.sty</code>
<code>hologo.pdf</code>	→ <code>doc/latex/hologo/hologo.pdf</code>
<code>example/hologo-example.tex</code>	→ <code>doc/latex/hologo/example/hologo-example.tex</code>
<code>hologo.dtx</code>	→ <code>source/latex/hologo/hologo.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 3.4 Refresh file name databases

If your `TEX` distribution (`TEX Live`, `MiKTEX`, ...) relies on file name databases, you must refresh these. For example, `TEX Live` users run `texhash` or `mktexlsr`.

## 3.5 Some details for the interested

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain `TEX`:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hologo.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
```

## 5 History

[2010/04/08 v1.0]

- The first version.

[2010/04/16 v1.1]

- \Hologo added for support of logos at start of a sentence.
- \hologoSetup and \hologoLogoSetup added.
- Options break, hyphenbreak, spacebreak added.
- Variant support added by option variant.

[2010/04/24 v1.2]

- LATEX3 added.
- VTEX added.

[2010/11/21 v1.3]

- iniTEX, virTEX added.

[2011/03/25 v1.4]

- ConTEXt with variants added.
- Option discretionarybreak added as refinement for option break.

## [2011/04/21 v1.5]

- Wrong TDS directory for test files fixed.

## [2011/10/01 v1.6]

- Support for package `tex4ht` added.
- Support for `\csname` added if `\ifin csname` is available.
- New logos:  $(\text{L})\text{\TeX}$ , biber,  $\text{BIB}\text{\TeX}$  (`sc`, `sf`),  $\text{em}\text{\TeX}$ ,  $\varepsilon_X\text{\TeX}$ , KOMA-Script,  $\text{IA}$ ,  $\text{LYX}$ , MiK $\text{\TeX}$ ,  $\mathcal{N}\mathcal{T}\mathcal{S}$ , OzMF, OzMP, Oz $\text{\TeX}$ , OzTtH, PCT $\text{\TeX}$ , PiC, PiCT $\text{\TeX}$ , METAFONT, MetaFun, METAPOST, MetaPost, SLI $\text{\TeX}$  (`lift`, `narrow`, `simple`), SLI $\text{\TeX}$  (`narrow`, `simple`, `lift`), te $\text{\TeX}$ .
- Fixes: ini $\text{\TeX}$ , pdf $\text{\TeX}$ , pdf $\text{\TeX}$ , vir $\text{\TeX}$ .
- `\hologoFontSetup` and `\hologoLogoFontSetup` added.
- `\hologoVariant` and `\HologoVariant` added.

## [2011/11/22 v1.7]

- New logos:  $\text{BIB}\text{\TeX}8$ ,  $\text{IAT}\text{\TeX}8$ , Sage $\text{\TeX}$ ,  $\text{\TeX}4\text{ht}$ ,  $\text{T}_\text{H}$ .
- $X_{\mathbb{E}}$  and friends: Driver stuff fixed.
- $X_{\mathbb{E}}$  and friends: Support for italic added.
- $X_{\mathbb{E}}$  and friends: Package support for `pgf` and `pstricks` added.

## [2011/11/29 v1.8]

- New logos:  $\text{H}\ddot{\text{a}}n\text{ Th}\acute{\text{e}}\text{ Th}\acute{\text{a}}n\hbar$ .

## [2011/12/21 v1.9]

- Patch for package `ifxetex` added for the case that `\newif` is undefined in ini $\text{\TeX}$ .
- Some fixes for ini $\text{\TeX}$ .

## [2012/04/26 v1.10]

- Fix in bookmark version of logo “ $\text{H}\ddot{\text{a}}n\text{ Th}\acute{\text{e}}\text{ Th}\acute{\text{a}}n\hbar$ ”.

## [2016/05/12 v1.11]

- Update HOLOGO@IfCharExists (previously in texlive)
- define pdfliteral in current luatex.

## [2016/05/16 v1.12]

- Documentation updates.

## [2017/05/01 v1.13]

- Removing spurious comments in bibliography. (github PR from yudai-nkt)

[2019/12/05 v1.14]

- Documentation updates.

[2021-11-16 v1.15]

- use PU directly for textepsilon and textchi, issue #4

## 6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
